

TRANSTHORACIC ECHOCARDIOGRAM REPORT

Name :		Height(m) : 0.00
MRN :	HUiTM0041482	Weight(kg) : 0.00
DOB :	1952-10-07	BSA(m2) : 0.00
Age :	73	BP Systolic : 122
Procedure Date :	2024-02-15 12:45:42	BP Diastolic : 56
Department :	FPP - SBC - Cardiology Clinic	Heart Rate : 68.00
Requested By :		85% THR : 124.95
Referred Dr. :		10% THR : 14.7
Report No. :	NICL-202443326	
Indication :	CAD 2015 tro cad tq	

PROCEDURE TTE - CARDIAC ASSESSMENT (MASS/THROMBUS/etc)

MACHINE GE VIVID S5 B

FINDINGS Satisfactory echo windows
 ECG: Sinus rhythm

Normal left ventricular size (LVIDD: 5.3cm, LVIDS: 3.9cm, LVEDVi: 57ml/m2, LVESVi: 30ml/m2) with normal systolic function.
 Calculated LVEF is 54% (method: Biplane Simpson's).

No gross regional wall motion abnormality seen.

Normal wall thickness (IVSd: 1.0cm, LVPWd: 0.9cm)

Impaired relaxation pattern of diastolic dysfunction with normal LV filling pressure (E velocity: 60cm/s, MV DecT: 158ms, E/A ratio: 0.8, e' medial: 8cm/s, e' lateral: 11cm/s, Average E/e': 7)

Normal right ventricular size (PLAX: 2.6cm, basal: 3.7cm, mid: 2.7cm) with normal systolic function (TAPSE: 2.2cm, TV S': 15cm/s).

Normal left atrial size with normal right atrial size (LAd: 3.2cm, LAVi: 23ml/m2, RAVi: 18ml/m2) .

Morphologically normal mitral valve leaflets. Mild MR on CFM. Single regurgitation jet. Regurgitation jet is central. Normal pulmonary venous inflow pattern.

Trileaflet aortic valve. Mild AR on CFM. Single regurgitation jet. Regurgitation jet is central. Holodiastolic aortic flow reversal is absent at thoracic /abdominal aorta. (LVOT VTI: 15.9cm, AV VMax: 1.9m/s, meanPG: 7mmHg)

Morphologically normal tricuspid valve leaflets. Mild to moderate TR on CFM. Multiple regurgitation jet. Normal hepatic venous inflow pattern. (TR Vmax: 3.6m/s, TR max PG: 52mmHg).

Morphologically normal pulmonary valve leaflets. Trivial PR on CFM. Single regurgitation jet. Regurgitation jet is central. (PV AT: 104ms).

Estimated pulmonary artery systolic pressure is at least 55mmHg, assuming RAP is 3mmHg

Intact of interatrial and interventricular septum. No colour Doppler evidence of ASD or VSD.

No intracardiac mass or thrombus visualized

Normal aortic root dimension (LVOTd:2.1 cm, AVd: 2.1cm, SOV: 3.4cm, STJ: 2.3cm, Asc Ao: 3.5cm)

IVC is normal in size (1.2cm) with more than 50% collapsibility index.

No pericardial effusion seen. No tamponade seen.

Impression

1. Normal left ventricular size with normal systolic function, LVEF is 54%.
2. Impaired relaxation pattern of diastolic dysfunction with normal LV filling pressure.
3. No gross regional wall motion abnormality.
4. Normal left atrial size, right ventricular size and right atrial size. No LVH or RVH
5. Estimated PASP is least 55mmHg, assuming RAP is 3mmHg
6. No significant valvular abnormality seen
